Florian Martin Piel

Berlin area, Germany | f.piel@gmx.de | florian-piel.space | github.com/Lollopie | linkedin.com/in/florian-piel-629097404/

Education

B.Sc. Computer Science — Oct. 2020 - Feb. 2026
Technische Universität Berlin — *Overall grade: 1,5*

Abitur — Sep. 2017 - Jul. 2020
OSZ TIEM — *Average grade: 1,2*

Abilities

Programming Languages & Frameworks

JavaScript, TypeScript, NestJS (Node.js), React, Java, Spring Boot, Python, PyTorch

Tools & Platforms

Git, GitHub Actions (CI/CD), PostgreSQL, Docker, MCP, Render, Linux

Languages

German (native), English (fluent), Spanish (basic knowledge)

Practical Experience & Projects

OmniStore | Live Demo* (*free hosting, ~50s cold start) | GitHub — Full-Stack Project

- Designed and built a B2B inventory management system with a NestJS backend, React frontend, and PostgreSQL database
- Set up a CI/CD pipeline with GitHub Actions for automated testing and automatic deployment to Render
- Built an MCP server allowing an AI model to read the database, test migrations in an isolated Docker container, and deploy them after manual human approval
- Integrated Stripe subscriptions: implemented the subscription workflow by hand to learn the Stripe setup, then used AI agents to add cancellation and plan changes

Application Tracker | GitHub — Spring Boot 4, Java 21, PostgreSQL 18

- Developed a REST API featuring session-based authentication with CSRF protection, per-user data isolation, enum-based status transitions with optimistic locking, filtering, and pagination.
- Built automated integration tests running in a GitHub Actions pipeline that publishes Docker images automatically.

International Information Security Contest | GitHub — Security / Full-Stack

- Built a web service with intentionally vulnerable JavaScript endpoints plus a Python checker to verify functional correctness
- Identified and exploited security vulnerabilities in services built by other participating teams

Frontend development course | Live Demo | GitHub — HTML, CSS, JS

- Development of multiple projects in teams of three
- Development of a jumping game as a final project

Bachelor Thesis | PDF | GitHub — Python, PyTorch

- Analyzed the impact of output-function choice when training AI models for semantic segmentation of Earth observation imagery

Operating Systems Lab — C, Assembler

- Developed a simple operating system for a Raspberry Pi

Algorithms & Data Structures Lab — Java

- Implemented an algorithm to swap two image segments while minimizing border contrast
